

GlowStar AI Data Assistant

Proposal & Commercial Options

Prepared for: Glow Star (Natural Diamonds)

Scope: An AI assistant integrated into Glow Star's existing ERP — ask any business question about your data in plain English and get an instant, accurate answer, with one-click export to Excel, PDF, or charts. No reports to build, no SQL, no new software for your team to learn.

What you get

A bespoke AI assistant that plugs into your current AasthaErp database (read-only — it never changes your data) and turns everyday questions into instant answers:

1. Ask anything, in plain language

- Type a question the way you'd ask a colleague — *"How many packets are on jangad?"*, *"Show RD stones above 1 carat by clarity"* — and get the answer in seconds
- Understands diamond & jewellery terminology out of the box: shape, colour, clarity, fluorescence codes, jangad, packets, purity, and your coded columns
- Handles typos and broken English, so anyone on the team can use it
- Remembers the conversation, so follow-up questions just work
- Every answer is backed by the exact data it pulled — no invented numbers

2. Instant reports & exports

- Turn any answer into a clean **Excel** sheet, **PDF**, or **chart** with one click
- No more waiting on someone to build a custom report
- Self-explanatory output your team can share immediately

3. Safe by design

- **100% read-only** — the assistant can only *read* your ERP, never insert, update, or delete anything
- Built-in guardrails block unsafe queries; every question is logged
- System and login tables are hidden from the assistant

Everything runs **inside your existing ERP infrastructure** — delivered as API endpoints + a simple chat screen. No separate server, hosting, or domain cost.

1 — One-Time Project Price

You pay once and own the system outright.

Deliverable	Amount
AI Assistant engine — natural-language → data, diamond/jewellery glossary, safety guardrails, session memory	₹60,000
Reports & exports — Excel / PDF / chart generation	₹15,000
Chat screen + integration into your existing ERP (API endpoints)	₹15,000
Deployment, testing (UAT), glossary sign-off & team handover	₹10,000
One-time total	₹1,00,000

Payment schedule

Stage	%	Amount
Kickoff / advance	30%	₹30,000
Assistant live in your ERP (answering questions)	35%	₹35,000
Final handover (exports + endpoints + docs)	35%	₹35,000

Running costs

Runs on your existing ERP infrastructure — **no server, hosting, or domain charges from us**. The only running input is the AI (Claude) usage itself.

Claude AI API charges (paid by you, directly to the AI provider)

The assistant is powered by Claude (Anthropic's AI). Each question your team asks uses a small amount of AI processing, billed **per question, directly to your own Claude account** — pass-through, with **no markup from us**. You pay only for what you actually use; there is no fixed monthly fee.

- **~₹7.50 per question** (current Claude rates)
- A built-in optimisation (response caching) can cut this by roughly **half** to **~₹4 per question** — switched on before go-live at no extra charge

Estimated monthly Claude API cost by usage:

Usage level	Questions / month	Standard	With caching
Light (~25/day)	500	~₹3,800	~₹1,900
Medium (~50/day)	1,000	~₹7,650	~₹3,800
Standard (~100/day)	2,000	~₹15,300	~₹7,600
Heavy (~250/day)	5,000	~₹38,250	~₹19,100

The AI bill scales exactly with how much your team uses the assistant — never a fixed cost. Every question is logged, so usage is fully transparent and you can check the exact figure at any time.

No other running costs. Your database, server, and ERP are already yours; the assistant adds nothing to them.

What unlocks the most value (your side, near-zero cost)

1. **Keep your glossary current.** As your team uses the assistant, we add any new product codes or terms it should know — a one-line change each time, no redevelopment.
 2. **Tell us your most-asked questions.** We tune accuracy against the real questions your team asks, so the answers get sharper over the first weeks.
-

Scope notes

Included: read-only natural-language Q&A over your AasthaErp database; chat screen; API endpoints into your existing ERP; Excel / PDF / chart export; session memory; safety guardrails; business glossary; deployment & handover.

Not included: any feature that *writes to* or modifies your ERP data; building new ERP modules; replacing your existing ERP/CRM; a full custom analytics dashboard (the chat screen + exports cover this; can be quoted separately); fuzzy/meaning-based search (optional add-on).

This proposal is an estimate of scope and price; final terms to be confirmed in a work agreement.
